Application for LLM Application Engineer

Dear KI Group team,

I am writing to apply for the LLM Application Engineer position at KI Group. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most of it retrieval and agent systems that have to stay grounded in a company's own data.

At Kniit, a start-up for the German energy sector, I was the only developer of an agentic knowledge-extraction pipeline and reported directly to the CTO. I built it from ingestion and chunking through prompt engineering to indexing, with an agent architecture in LangGraph where extraction, relationship, consolidation and reflection agents run in parallel. Its users were SAP domain experts, who validated and approved knowledge-graph changes in a React and Python review app I built on Azure. I measured the output against a ground truth derived from SAP system data; precision and recall went from 33% and 45% to 93% and 90%. When a second, high-volume source did not need a model, I built a code-based pipeline instead and cut a projected $200,000 LLM budget to near zero. I also built an MCP service that makes the knowledge graph available to AI tools with millisecond-latency retrieval.

Retrieval quality is something I studied in depth. My master's thesis at Covestro automated the evaluation of a RAG system with RAGAS and PytrecEval against chemist-provided ground truth, and I benchmarked multilingual embedding models on more than a million chunks of chemical data, along with chunking strategies and fine-tuning models for retrieval. As an AI consulting intern I then built an agentic application with a FastAPI backend and React frontend, deployed to AWS with CDK.

This is why pricenxt interests me: proprietary price indices and market data, and a new product where a conversational analyst or an MCP interface has to be exact about numbers and honest about sources. I studied mechanical engineering and spent a year and a half around polymer chemists at Covestro, so the plastics and chemicals side of pricenxt is familiar ground to me. My backend work has been in Python; TypeScript and Node.js I would pick up on the job.

I will be based in Frankfurt am Main, hold an EU Blue Card and can start on 15 November 2026. My English is business fluent and my German is B1. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
