Application for Junior Engineer (AI)

Dear Hiring Team,

I am writing to apply for the Junior Engineer position (AI track) at Almedia. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the only developer of an agentic system for domain experts in the German energy sector, from the Python back end to the React screen they work in.

You ask for hands-on work with LLMs, and that is what I have done for the last three years. At Kniit I built the knowledge-extraction pipeline for German energy-sector documents on my own, reporting to the CTO. It runs four LangGraph agents in parallel for entity extraction, relationship analysis, consolidation and reflection. Scored against a ground truth taken from SAP data, precision and recall went from 33% and 45% to 93% and 90%. I got there by looking at where the output was wrong and fixing the cause, not by rewording prompts until it looked better.

For a second, high-volume source I replaced the LLM calls with deterministic code, which cut a projected $200,000 LLM budget to almost nothing and pushed accuracy towards 100%. Thinking about what breaks and what it costs before it happens is a habit I take into every system. I also built an MCP service that exposes the knowledge graph to Claude Code with millisecond retrieval, and I use Claude Code with custom skills every day, always checking what it writes.

My production code is Python: FastAPI and Python microservices at Kniit and Covestro, backed by Postgres, MongoDB and Neo4j. At Covestro I shipped a LangGraph application with a React front end, containerized with Docker and deployed to AWS with CDK and GitLab CI/CD. I have not used TypeScript or Node.js in a job yet and would pick them up on your codebase.

Almedia interests me because you are a profitable, bootstrapped company where a small engineering team owns real problems early. With Freecash and a community of 95 million users, there are plenty of internal agents and AI features worth building, and I would rather ship them in a small team than hand them over in a large one.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
