Application: KI- und Prozessmanager (m/w/d)

Dear HOTREGA Team,

I am writing to apply for the KI- und Prozessmanager position at HOTREGA. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and much of it was close to chemistry: I worked in three roles at Covestro, two of them directly with chemists and their data.

At Kniit GmbH I am the only developer on an AI system that extracts knowledge from energy-sector documents. It runs several AI agents in parallel, each with its own prompts and task. I tested it against ground truth from SAP systems and raised precision and recall from 33% and 45% to 93% and 90%. That is how I think about AI assistants in general: they are ready for productive use once they have been measured, not before.

At Covestro I worked on AI for the chemical industry. In my master's thesis I automated the testing of an AI assistant over internal chemical documents, comparing its answers with ground truth written by chemists. Before that, as a data science intern, I predicted the outcome of prepolymer syntheses from process data and built a dashboard where chemists could try parameter changes before running a batch.

Good automation starts with the process, not the tool. At Kniit I worked with SAP domain experts and built an internal tool where they review and approve changes to the knowledge base themselves. For a second, high-volume data source a deterministic pipeline brought a projected $200,000 LLM budget down to almost no running cost, which showed me that not every step needs AI. I build my workflows in Python today and have not used n8n or Microsoft Copilot in a job yet, but they cover the same steps I already build in code. I would document each AI use case with the EU AI Act and data protection requirements in mind from the start.

HOTREGA develops and produces a wide range of cleaning and care products, adhesives and sealants in its own lab, each with its own technical and safety data sheet, and sells them through retailers and expert advisers. Product questions, data sheets and hygiene plans are a natural place for an AI assistant to save your team time, and a company with short decision paths is a good place to bring it into real use quickly.

I live in Essen, hold an EU Blue Card and can start on 15 November 2026. I am happy to relocate to the Bad Salzschlirf area. My German is at B1 level, and I am glad to use it at work while I keep improving it.

Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
