Application for Software Engineer Conversational AI

Dear BITMARCK team,

I am writing to apply for the Software Engineer Conversational AI position at BITMARCK. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most of them built on large language models, retrieval and agents.

At Kniit, a start-up building for the German energy sector, I am the only developer of an LLM-based knowledge-extraction system and report directly to the CTO. I built it with LangChain and LangGraph as a set of agents for entity extraction, relationship analysis, consolidation and reflection. I validated it against ground truth taken from SAP systems and kept improving prompts and agents until precision and recall went from 33% and 45% to 93% and 90%. I also built the parts around it: an MCP query service with millisecond-latency retrieval, and a React and Python web app on Azure where domain experts validate and approve changes.

RAG is the topic I know best. My Master's thesis at Covestro evaluated PrismaChat, a RAG chat system on internal chemical data: I automated the evaluation of answers and retrieval with RAGAS and PytrecEval against answers written by chemists, and benchmarked multilingual embedding models on more than a million chunks. I have worked with Qdrant, Pinecone and Azure AI Search, with LLMs through APIs, and with open-source models, including fine-tuning Open Llama 3B with QLoRA.

As an AI consulting intern at Covestro I built an agentic application end to end: a LangGraph agent that routes each request to vector search, general inference or summarization, a FastAPI backend with REST APIs tested in Postman, and a React frontend, containerized with Docker and deployed to AWS with CDK, with CI/CD in GitLab.

BITMARCK builds the software standard that most statutory health insurers in Germany run on, so it handles health data for millions of insured people. A chatbot in that setting has to give correct answers and handle data carefully, which is the kind of work I have done: making AI output reliable enough that domain experts sign off on it. I have not worked in health insurance yet, and I would like to learn it here.

I am based in Essen, am open to any of your other locations, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level and I am improving it. Thank you for considering my application. I would be glad to discuss how I could help build your chatbot and voicebot products.

Kind regards,

Chandu Prasad Bhairapu
