Application for Founding Software Engineer

Dear Bestandsfaktor team,

I am writing to apply for the Founding Software Engineer position at Bestandsfaktor. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the only developer of an AI knowledge-extraction system at an early-stage start-up.

At Kniit, a start-up building for the German energy sector, I own an agentic knowledge-extraction system end to end and report directly to the CTO. No other developer worked on it. I designed the architecture, from ingestion and chunking to prompts, a LangGraph system of parallel agents and the indexing behind it, and I chose the extraction strategy for each source: agentic, deterministic or monolithic. The clearest example is a second, high-volume data source: running it through LLMs would have cost a projected $200,000, so I built a deterministic, code-based pipeline instead and brought the recurring cost close to zero.

I want quality I can measure. I tested the agent system against ground truth taken from SAP systems and changed prompts and agents until precision and recall rose from 33% and 45% to 93% and 90%. Around it I built an MCP query service that serves the knowledge graph with millisecond latency, and Expert Interface, a React and Python microservices app on Azure where domain experts approve changes. I built it with Claude Code, custom skills and agentic coding workflows. It let me move fast on my own and still keep the code base clean.

Routing and automation logic is familiar ground. As an AI consulting intern at Covestro I worked with business stakeholders to understand how they make decisions, then built a LangGraph application that routes each request to vector search, inference or summarization, with a FastAPI backend, Docker and deployment to AWS with CDK and GitLab CI/CD.

What draws me to Bestandsfaktor is that it is a systems problem: deciding which action makes sense for which client and when, from the GKV-Beitrags-Wächter to the coverage radar, and learning from what happens next. With more than 50,000 of your brokers' clients in the system after only a few weeks, the architecture decisions made now will carry a lot of weight. I would like to make them with you.

I can work remotely from anywhere in Germany, am happy to come to Cologne whenever needed, hold an EU Blue Card and can start on 15 November 2026. I speak German at B1 level. Thank you for considering my application. I would be glad to talk about how I could help build the engine behind Bestandsfaktor.

Kind regards,

Chandu Prasad Bhairapu
