Application for AI Developer

Dear Hiring Team,

I am writing to apply for the AI Developer position at Ingersoll Rand. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently with LLM agents and RAG on real company data.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I built LangGraph multi-agent extraction for complex regulatory documents and raised precision and recall from 33% and 45% to 93% and 90%, measured against ground truth from the SAP system. I also built an MCP query service on top of the knowledge graph and a React and Python interface that domain experts use to approve changes, so the step from prototype to something people rely on is familiar to me.

My RAG experience started at Covestro. For my Master's thesis I designed RAG pipelines with vector databases, benchmarked multilingual embedding models on more than one million chunks and evaluated answers with RAGAS against ground truth from chemists. As an AI consulting intern there I talked with business stakeholders about their decision-making workflows, then built an agentic assistant with LangGraph, FastAPI and React and deployed it on AWS with Docker, CDK and GitLab CI/CD.

Your description of a builder who also talks to end-users and turns their requirements into working solutions is how I already work: at Kniit I worked with SAP experts to define what the pipeline should extract, and at Covestro I worked with chemists the same way. I would like to do that for sales, service and supply chain teams across Ingersoll Rand, inside a global AI team where engineers ship products side by side.

I am based in Germany, hold an EU Blue Card, can work fully remote or from Brno, and can start on 15 November 2026. I am happy to travel occasionally. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
