Application for Editorial Technologist (m/f/d)

Dear Hiring Team,

I am writing to apply for the Editorial Technologist position at ida. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an LLM-based system that I took from first prototype to a deployed product.

Your posting asks for prototypes that run from data storage and API to the interface. That is how I have worked. At Covestro I built an agentic application with a Python and FastAPI backend and a React front end, tested the API with Postman, and deployed it to AWS with Docker and CDK. At Kniit I built the Expert Interface, a React web app on Python microservices and Azure, so that domain experts could review and approve changes to a knowledge graph.

LLMs and agents are part of my daily work. I built multi-agent pipelines with LangGraph, an MCP query service on top of a knowledge graph, and I develop with Claude Code and custom skills. I also know where they fail: for one high-volume source I replaced LLM calls with deterministic code, which took a projected $200,000 LLM budget down to near-zero running cost.

I work with the people who will use the tool. At Kniit I built the pipeline together with SAP domain experts and answered to the CTO. At Covestro I talked to business stakeholders about how they make decisions before proposing how agents could help, and my thesis was evaluated against ground truth provided by chemists. I have not worked in a newsroom or a media house, and I have not yet pitched to clients or spoken at conferences. Explaining technical choices to non-technical colleagues is something I do regularly, and I would like to learn the editorial side from your team.

ida was founded by MDR and ZDF Digital to develop digital offerings together with broadcasters, and your team tests prototypes with editors before they go into production. That loop of building something small, putting it in front of its users and improving it is the work I want to do.

I am based in Leipzig, hold an EU Blue Card, and can start on 15 November 2026. I am happy to travel to client sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
