Application for Software Developer for AI & Automation (m/f/d)

Dear Hiring Team,

I am writing to apply for the Software Developer for AI & Automation position at KB Marketing. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as an engineer who built and shipped a production pipeline with Claude Code at Kniit.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I worked with Claude Code, custom skills and agentic coding workflows, and I read and tested what it generated instead of accepting it blindly. I also built an MCP query service on top of the knowledge graph, so coding agents and people query the same knowledge base. For a second, high-volume source stream I replaced LLM calls with deterministic code, which took a projected $200,000 LLM budget down to near-zero running cost. That is the approach I would bring to your automation work: check first whether code, rather than a model, solves the problem.

On the data side I work with Postgres, MongoDB and Neo4j, build REST APIs with FastAPI, and have set up RAG systems and multi-agent workflows with LangGraph. At Covestro I built an agentic application with a React front-end and Python backend, after working with business stakeholders to understand their decision-making workflows. My thesis there evaluated RAG systems against ground truth provided by chemists. At Kniit the domain experts from SAP played that role, and I turned their requirements into the extraction design and the curation web app they use to approve changes.

Your posting describes a company that already runs on its own AI systems and is now turning them into services for about 150 industrial Mittelstand clients. Building internal tools first and turning them into client services later is what I would like to work on, and I am happy to be on site in Essen five days a week.

I am based in Essen, hold an EU Blue Card, and can start on 15 November 2026. I am happy to travel to client sites when needed. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
