Application for AI Solution Engineer

Dear Chrono24 team,

I am writing to apply for the AI Solution Engineer position at Chrono24. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and the part of that work I enjoy most is sitting with the people who have the problem and building the first version with them.

That is what I did as an AI consulting intern at Covestro. I worked with business stakeholders to understand how they made decisions day to day, advised them on where an agentic setup could support that work, and then built it: a LangGraph application that sends each request to vector search, general LLM inference or summarization, with a FastAPI backend and a React front end, deployed to AWS with Docker and CDK.

At Kniit, a start-up working for the German energy sector, I am the only developer of an LLM-powered knowledge-extraction system and report directly to the CTO. Much of the job is prompt engineering and judgment. I measured the multi-agent LangGraph workflow against ground truth from SAP systems and kept changing prompts and agents until precision and recall rose from 33% and 45% to 93% and 90%. For a second, high-volume source I decided an LLM was the wrong tool and wrote a deterministic pipeline instead, which cut a projected $200,000 LLM budget to near-zero recurring cost. Your role asks for the same call: when a simple automation is enough, and when a use case belongs with the ML team.

Integration is the other half. I built an MCP service that gives Claude Code millisecond-latency access to our knowledge graph, and Expert Interface, a React and Python web app on Azure where domain experts validate and approve changes to the graph themselves. That is the pattern I would bring to Chrono24: make internal systems reachable through APIs and MCP, then hand teams something they can run on their own.

Chrono24 already shows what AI can do for the customer with the Watch Scanner, which recognizes a watch from a single photo. I would like to bring the same practical use of AI to the work inside the company, for Growth, Finance or People & Culture, on top of the platform your Tool Enablement team provides.

I will be based in Karlsruhe, hold an EU Blue Card and can start on 15 November 2026. My English is business fluent; my German is at B1 and I am actively improving it. Thank you for considering my application. I would be glad to talk about which manual processes you would like to tackle first.

Kind regards,

Chandu Prasad Bhairapu
