Application for Data Scientist für Compliance

Dear Ms Werner,

I am writing to apply for the Data Scientist für Compliance position at Finanz Informatik. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and the predictive-model side of that work is what draws me to fraud detection in payments.

My most hands-on predictive modelling was at Covestro, as a Data Scientist intern. I built and compared Random Forest, XGBoost and LSTM models on time-series process data, engineered lag features and rolling statistical windows from raw sensor streams, and benchmarked the models against traditional empirical curve-fitting. The result was earlier identification of batches likely to go out of specification, which is a close cousin of spotting an unusual transaction before damage is done. At Cognizant I developed ARIMA, SARIMA, Prophet, XGBoost and LSTM models for EV load forecasting, and the LSTM reached 96% test accuracy on unseen data.

Validation is the part I take most seriously. At Kniit, where I am the sole developer of a knowledge-extraction pipeline for the German energy sector, I validate the extraction against a ground truth derived from SAP system data; precision and recall rose from 33% and 45% to 93% and 90%. For a second high-volume source I chose a deterministic, code-based pipeline over LLM calls, which cut a projected $200,000 LLM budget to near-zero recurring cost. The work runs on Python microservices with Neo4j, MongoDB and Postgres.

To be clear about gaps: I work with SQL and Pandas but have not used PySpark in a professional role, and I have not yet worked in payments or compliance. Both are areas I would build up quickly by working directly in your existing pipelines.

What interests me about your unit is the requirement that models be precise, explainable and able to hold up to regulatory scrutiny at the same time. The KIXpertS study with Kreissparkasse Köln, where every flagged transaction is described by its deviation from typical customer behaviour and false alarms went down, is the kind of explainable ML I want to work on.

I can work from Frankfurt, Münster or Hannover, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level and improving; my English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
