Application for Software Engineer

Dear TerraTech Team,

I am writing to apply for the Software Engineer position at TerraTech Holding. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and most of that work was ordinary software engineering around the models: APIs, a web front end, databases and deployment. At Kniit I worked in a small team next to the founders.

At Kniit I am the only developer of a knowledge-extraction system for the German energy sector and report to the CTO. I also built Expert Interface there, a React front end on Python microservices deployed on Azure, where domain experts validate changes to the knowledge graph. I took it from their requirements to a running application. I write much of this code with Claude Code and my own skills, and I read what the agent produces before it goes in, because the review is where the quality comes from.

At Covestro I worked as an AI consulting intern and turned stakeholder requirements into an application with a FastAPI back end and a React front end. I tested the APIs with Postman, containerized everything with Docker and deployed it to AWS with CDK, with CI/CD in GitLab. I also built a Model Context Protocol service that gives coding agents access to our data, and I chose a plain deterministic pipeline over an LLM one for a high-volume source, which cut a projected $200,000 LLM budget to almost nothing.

My professional backend work is in Python. I have not yet shipped TypeScript in a job, so that is the area where I would need to get up to speed fastest. I have also not used Alembic, Grafana or Prometheus in production, but the Postgres, Docker and AWS parts of your stack are familiar ground.

Owning complete features, from requirements to production, in a small team with the founders is what I am looking for in my next role, and the way you describe the job, with substantial ownership and AI coding agents as everyday tools, matches how I already work.

I am based in Frankfurt am Main, hold an EU Blue Card and can start on 15 November 2026. My English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
