Application for GTM Engineer – AI Automation

Dear Hiring Team,

I am writing to apply for the GTM Engineer – AI Automation position at Sharpist. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of a data pipeline and its internal tools, working directly with the people who use them.

At Kniit, a startup in the German energy sector, I owned the whole pipeline: ingestion, extraction with LangGraph agents, indexing, and a Python service that exposes the results through an API. I also built the Expert Interface, a React front-end with a Python back-end on Azure, so that domain experts could review and approve what the pipeline produced. I reported to the CTO and worked without a team around me, which is close to the solo setup you describe. One of my pipelines replaced an LLM-heavy step with plain code and took a projected $200,000 LLM budget down to near zero, so I check whether an AI step really earns its place.

At Covestro I talked to business teams about how they make decisions and built an agentic application around it, with FastAPI, React, Docker and deployment on AWS with CDK and GitLab CI/CD. I tested the APIs with Postman and worked with Python every day. I have not worked with HubSpot, Salesforce, Segment or Looker. To close that gap I am building a small n8n project that takes requests via webhook and email, qualifies them with an LLM and pushes the result to a CRM through a REST API, with logging and error handling.

Sharpist matches coaches with learners in organizations across more than 30 countries, so sales and customer success deal with a lot of data from different systems. Working directly with the CEO and the sales and marketing teams to make that flow reliably is the kind of work I like.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. I am happy to work from your Berlin office five days a week. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
