Application for Machine Learning / MLOps Engineer (m/w/d)

Dear BDO Recruiting Team,

I am writing to apply for the Machine Learning / MLOps Engineer position at BDO Germany. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, from the model to a service that other people use.

At Kniit, a start-up working for the German energy sector, I am the only developer of an agentic knowledge-extraction system and report directly to the CTO. I built the multi-agent LangGraph pipeline and evaluated it against a ground truth test set derived from SAP data, which raised precision and recall from 33% and 45% to 93% and 90%. I also built a Model Context Protocol (MCP) server that exposes the knowledge graph for retrieval and plugs into Claude Code, and a web app on Azure where domain experts approve changes. The Python services run in Docker and Kubernetes.

At Covestro I worked on the operating side as well. As an AI consulting intern I worked with business stakeholders on their decision workflows, then designed and deployed an agentic application with LangGraph, containerized it with Docker, deployed it to AWS with CDK and ran it through GitLab CI/CD. My master's thesis was about measuring quality: I automated generation and retrieval evaluation of a RAG system with RAGAS and PytrecEval and set up its AWS infrastructure as code.

Two things are new to me. I have not used Copilot Studio or Azure Machine Learning, and I have not worked under a formal AI governance or AI security framework. My cloud work is on Azure and AWS, including Azure AI Search, and I have run CI/CD, containerized deployments and systematic evaluation of LLM and RAG systems in my jobs. The Microsoft services are what I would learn first.

What draws me to the role is the scope: one person who builds the AI platform, runs it, builds agents on it and compares new tools and models. At a firm whose business is trust, I would want governance and security built in from the start, and a corporate IT team that sits close to the people using the results is where I can do that.

I am based in Hamburg, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
