Application for AI Engineer

Dear Hiring Team,

I am writing to apply for the AI Engineer position at Digital55. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently with LLM agents and RAG systems that automate real document and decision workflows.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I designed the prompts and a LangGraph multi-agent setup (extraction, relationship analysis, consolidation, reflection), and measured quality against ground truth until precision and recall went from 33%/45% to 93%/90%. I also built an MCP query service that exposes the knowledge graph and plugged it into Claude Code. I use Claude Code and custom skills daily, so automating parts of the development cycle with AI is already how I work.

At Covestro I built an agentic application with LangGraph that routes between vector-database queries, general inference and summarization, with a FastAPI backend deployed on AWS. My Master's thesis there was on benchmarking RAG systems: I automated generation and retrieval evaluation with RAGAS and PytrecEval and compared multilingual embedding models on more than one million chunks. I have worked with LangChain and LangGraph rather than LlamaIndex, Semantic Kernel, AutoGen or CrewAI, and the agent concepts carry over directly.

Digital55 has been building software for over 20 years, and this project applies LLMs and agents to the software development cycle itself, which is the kind of problem I like working on. I have not worked in aviation or air traffic management, but I would be glad to learn the domain.

I am based in Germany, hold an EU Blue Card, and can start on 15 November 2026. I am happy to work remotely or in a hybrid setup and to travel when needed. Thank you for considering my application. I would be glad to talk it through.

Kind regards,

Chandu Prasad Bhairapu
