Application for Software Engineer (m/w/d) - Python / KI / Web-Services

Dear Hiring Team,

I am writing to apply for the Software Engineer (m/w/d) - Python / KI / Web-Services position at DOCMAiTE. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, mostly in Python, and I want to build AI features for a product that practices rely on daily.

Python and web services are what I do most. At Kniit I was the sole developer of a knowledge-extraction pipeline and of the Expert Interface, a React frontend with Python microservices on Azure, where domain experts approve changes. At Covestro I built a FastAPI backend and a React frontend, containerised the stack with Docker and deployed it to AWS with CDK, using GitLab CI/CD and Git throughout. Postgres is part of my daily stack. I have not worked with Django yet, but FastAPI gave me the same habits around routing, data models and testing.

Your core product extracts information from documents with local models, which is close to my work. At Kniit I cut an LLM-based extraction approach to code for a high-volume source, and a multi-agent pipeline on complex documents reached 93% precision and 90% recall against a reference data set. In my Master's thesis at Covestro I built RAG evaluation and fine-tuned open-source models for retrieval, and I fine-tuned an open-source LLM with QLoRA in a personal project, so running models outside a hosted API is familiar ground. I work in agile teams, write tests and enjoy code reviews, and I can handle JavaScript and Bootstrap on the frontend.

I like that DOCMAiTE grew out of research at the University of Göttingen and that practices became customers who then invested. A small team where my work reaches users quickly is what I am looking for. I am based in Oldenburg, hold an EU Blue Card and can start on 15 November 2026. A 4-day week is fine for me, and I am happy to be in the office three to four days.

Thank you for considering my application. I would be glad to show you how I would approach document classification and extraction in your product.

Kind regards,

Chandu Prasad Bhairapu
