Application for Forward Deployed Engineer

Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer position at Joppy. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic knowledge-extraction system, which is the kind of embedded, own-it-end-to-end work your client needs.

At Kniit I worked with SAP domain experts across the German energy sector to understand their documents and processes, and only then designed the solution. I built the multi-agent extraction pipeline in LangGraph and raised precision and recall from 33%/45% to 93%/90% against a ground truth taken from their SAP systems. For a second, high-volume source I replaced the LLM calls with a deterministic pipeline, which cut a projected $200,000 LLM budget to near-zero recurring cost. I reported directly to the CTO, so I am used to explaining technical decisions and trade-offs to the people who depend on them.

Taking things to production is the part I care about most. I delivered an MCP query service that exposes the knowledge graph with millisecond latency, and an Expert Interface (React, Python microservices, Azure) where domain experts approve changes to the graph. At Covestro I worked with business stakeholders on their decision-making workflows and then built and deployed an agentic application with LangGraph, FastAPI and React on AWS using Docker, CDK and GitLab CI/CD.

I use Claude Code every day, with custom skills and agentic coding workflows, and I can explain why I accepted or rejected what it produced. A client in US healthcare and insurance that moves slowly, and wants AI in production instead of another pilot, is a setting where careful discovery pays off, and that is the work I want to do.

I am based in Germany, hold an EU Blue Card, work fluently in English with international teams, can start on 15 November 2026 and am happy to work fully remote and to travel to client sites. Thank you for considering my application. I would be glad to walk you through my work in a call.

Kind regards,

Chandu Prasad Bhairapu
