Application for Data Scientist – AI Engineering

Dear Hiring Team,

I am writing to apply for the Data Scientist – AI Engineering position at Just Eat Takeaway.com. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently multi-agent LLM systems where every change had to be proven with numbers.

At Kniit I was the sole developer of an agentic knowledge-extraction pipeline for the German energy sector. I built it with LangGraph as parallel entity-extraction, relationship-analysis, consolidation and reflection agents, and exposed the result to other agents through an MCP query service. I measured every iteration against a ground truth derived from SAP systems, which took precision and recall from 33%/45% to 93%/90%. A second, code-based pipeline for a high-volume source replaced a projected $200,000 LLM budget with near-zero recurring cost. That is the habit your role asks for: an evaluation that decides whether a change ships.

My master's thesis at Covestro was about exactly that kind of evaluation. I automated retrieval and generation evaluation for a RAG system with RAGAS and PytrecEval against chemist-provided ground truth, and benchmarked multilingual embedding models on more than one million chunks. In my consulting internship at Covestro I worked with business stakeholders on their decision workflows, then built and deployed a LangGraph agent with a FastAPI backend and a React front-end, containerised with Docker and shipped through GitLab CI/CD. I write Python and SQL daily, and my data science background (forecasting and prediction models at Covestro and Cognizant) means I am used to asking whether an observed change is real.

I have not yet run agents with live users at production scale or built tracing dashboards and alerts for them, and I would like to learn that at a company where agents support people in real time across markets and languages. A delivery network where operations colleagues rely on the agent to resolve issues and hand over to humans is a harder and more interesting problem than most I have seen.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
