Application for Data Scientist

Dear Hiring Team,

I am writing to apply for the Data Scientist position at Pyramid Consulting. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a focus on machine learning, large data sets and explaining results to the people who use them.

My data science work started at Covestro, where I predicted prepolymer synthesis outcomes from time-series process data. I built Random Forest, XGBoost and LSTM models, engineered lag features and rolling statistical windows from sensor data, and benchmarked them against the empirical curve-fitting the chemists already used. I then built a Streamlit dashboard so the chemists could simulate parameter changes before running a physical batch. At Cognizant I developed ARIMA, SARIMA, Prophet, XGBoost and LSTM models for EV load forecasting; the LSTM reached 96% test accuracy.

For my Master's thesis at Covestro I benchmarked multilingual embedding models on over one million chunks of internal data and automated RAG evaluation with RAGAS and PytrecEval against ground truth provided by chemists. At Kniit I was the sole developer of a multi-agent extraction pipeline for the German energy sector, raising precision and recall from 33%/45% to 93%/90% against an SAP-derived ground truth. I also replaced a costly LLM step with a deterministic pipeline, which cut a projected $200,000 LLM budget to near-zero recurring cost.

Working with business stakeholders is part of how I work. As an AI consulting intern at Covestro I met stakeholders to understand their decision-making workflows and translated their requirements into a solution approach, and at Kniit I reported directly to the CTO and worked with SAP domain experts. My day-to-day language is Python, with SQL and relational databases such as Postgres. I have not used R or Scala in a job, but I am comfortable picking up new tools quickly.

A 12-month contract with client-site work suits me well. I am based in Germany, hold an EU Blue Card, am willing to travel frequently, and can start from 15 November 2026. Thank you for considering my application. I would welcome a conversation about the client's data challenges.

Kind regards,

Chandu Prasad Bhairapu
