Application for AI Engineer (m/w/d)

Dear Hiring Team,

I am writing to apply for the AI Engineer position at SoftProject GmbH. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an LLM-based knowledge-extraction system, and I enjoy the step from first experiment to something customers can rely on.

At Kniit I built a multi-agent extraction pipeline with LangGraph for complex regulatory documents and raised precision and recall from 33

I also build the software around the models. At Kniit that meant a Model Context Protocol query service with millisecond-latency retrieval and a React and Python web app on Azure that lets domain experts approve changes. At Covestro I built an agentic application with FastAPI and React, containerised it with Docker and deployed it to AWS with CDK and GitLab CI/CD. For my Master's thesis there I evaluated RAG systems with RAGAS against chemist-provided ground truth, so testing and measuring quality is familiar ground for me.

Your posting describes prototypes that grow into maintainable features, with attention to security, privacy and reliability. That matches how I like to work: sit with the people who own the process, build something small, measure it, then harden it. SoftProject's focus on automating business processes for customers is the kind of setting where this pays off.

I am based in Karlsruhe, hold an EU Blue Card and can start on 15 November 2026. My German is B1, and I work in English every day. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
