Application for Machine Learning Engineer (all genders)

Dear Hiring Team,

I am writing to apply for the Machine Learning Engineer position at Avelios Medical. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently LLM and RAG systems that run in production next to the people who use them.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I built multi-agent LLM extraction with LangGraph and measured it against ground truth from the customer's SAP system, which raised precision and recall from 33

My Master's thesis at Covestro was about evaluating RAG systems. I automated generation and retrieval evaluation with RAGAS and PytrecEval against chemist-provided ground truth, benchmarked multilingual embedding models on more than one million chunks, and fine-tuned models for retrieval. That is the evaluate, benchmark and fine-tune loop you describe, with domain experts judging the answers. I work in PyTorch and Hugging Face Transformers, and I have used vector databases such as Qdrant and Azure AI Search. In my internship at Covestro I deployed an agentic application with FastAPI, Docker and AWS CDK behind a React front end, so I am used to shipping models into a real product with a development team.

I have not trained speech recognition models or worked with federated learning frameworks yet. Both build on what I already do, and I would be glad to learn them on clinical data. Avelios puts these models inside hospital workflows for doctors and nurses, and the mix of LLMs, ASR and privacy-preserving training on real clinical data is the kind of problem I want to work on.

I am based in Munich, hold an EU Blue Card and can start on 15 November 2026. I am fluent in English and have B1 German. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
