Application for (Junior) Cloud Data Engineer (all genders)

Dear Hiring Team,

I am writing to apply for the (Junior) Cloud Data Engineer position at DYMATRIX. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of a data and extraction pipeline for the German energy sector.

At Kniit I owned that pipeline from ingestion and chunking to indexing, and reported directly to the CTO. For a second, high-volume source stream I replaced LLM calls with a deterministic, code-based extraction, which cut a projected LLM budget of $200,000 to near-zero recurring cost. I also built a graph curation web app on Azure with a Python backend, so that domain experts can check and approve changes before they reach the data. Python and SQL are what I use every day.

At Covestro I worked on the cloud side. I built AWS infrastructure with CDK (Lambda, SQS, DynamoDB) for a RAG evaluation, and I containerized a FastAPI and LangGraph application with Docker and shipped it through GitLab CI/CD. I benchmarked embedding models on more than one million data chunks, and as a data science intern I engineered features from sensor time series and put the predictions into a Streamlit dashboard for chemists. Your tasks include Azure Functions in C# and Data Factory pipelines. I have not worked with C#, Data Factory or Databricks professionally. I know the pipeline and ETL concepts behind them and plan to learn this stack on the job.

DYMATRIX caught my attention because you hire people with and without experience and put them into project teams that work directly with customers. I like that you also use an OpenAI-based assistant in daily development, since I work with AI coding tools the same way. A team that builds data processing for both batch and real-time use is where I want to grow.

I am based in Stuttgart, hold an EU Blue Card and could start on 15 November 2026. I am happy to travel to client sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
