Application for Data Analyst - Claims

Dear Hiring Team,

I am writing to apply for the Data Analyst - Claims position at HUK-COBURG. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a steady focus on turning messy data into models and tools that people in a business team actually use.

Your posting asks for machine learning on process data. At Covestro I built and compared Random Forest, XGBoost and LSTM models on sensor time series, engineered lag features and rolling windows, and benchmarked them against the empirical methods the chemists already used. A Streamlit dashboard let them simulate parameter changes and see predicted outcomes before running a batch. That is the same pattern as steering work in a claims organisation: a model is only useful if the specialist department can read it and act on it.

On data infrastructure, I recently was the sole developer of a knowledge-extraction pipeline for the German energy sector, from ingestion to indexing, working directly with the CTO and SAP domain experts. I raised precision and recall from 33%/45% to 93%/90% and cut a projected $200,000 LLM budget to near-zero running cost by moving a high-volume stream to deterministic code. For my Master's thesis I benchmarked embedding models on over one million data chunks and built the AWS evaluation infrastructure with CDK.

I also enjoy explaining results to non-technical stakeholders. At Covestro I worked with business teams to understand their decision workflows before choosing the technical approach. I have no insurance claims background and have not worked with causal inference in production, so I would be learning the domain and those methods on the job.

HUK-COBURG's size and its focus on efficient, customer-centred claims handling make this a data problem with real volume and real consequences. I am based in Nuremberg, hold an EU Blue Card and can start on 15 November 2026. I can be on site in Coburg as the hybrid model requires. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
