Application for Generative AI Software Engineer Specialist

Dear Hiring Team,

I am writing to apply for the Generative AI Software Engineer Specialist position at Accenture Song. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of a multi-agent knowledge-extraction system for the German energy sector.

At Kniit I designed that system with LangGraph: entity-extraction, relationship-analysis, consolidation and reflection agents running in parallel over complex regulatory documents. I measured it against ground truth derived from the client's SAP system and raised precision and recall from 33% and 45% to 93% and 90%. I also built an MCP query service over the knowledge graph and connected it to Claude Code, and a second, code-based extraction pipeline that removed a projected $200,000 LLM budget. I used LiteLLM as the model-provider layer there, so keeping a pipeline portable across providers is familiar ground.

Your posting stresses delivery as much as design. At Covestro I deployed an agentic LangGraph application with a React front end and a FastAPI backend, containerised it with Docker, shipped it to AWS with CDK and ran it through GitLab CI/CD. At Kniit I built the Expert Interface, a React and Python web app on Azure where domain experts approve changes to the knowledge graph, so I have worked on the human-in-the-loop side of AI products. For my thesis I evaluated RAG systems with RAGAS and PytrecEval against chemist-provided ground truth, and I carry that habit of measuring before trusting into every agent I build.

The consulting part of the role is familiar too. During my internship at Covestro I talked to business stakeholders about their decision-making workflows, advised them on where agentic AI could help and turned that into a technical approach. My infrastructure-as-code experience is with AWS CDK rather than Terraform or Helm.

Accenture Song's studio model, with engineers working next to designers and strategists on AI-native products, is the environment I want to work in. I would like to build agents that clients can understand and trust, not only ones that score well on a benchmark.

I am based in Frankfurt am Main, hold an EU Blue Card, can start on 15 November 2026 and am happy to travel to client sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
