Application for Software Engineer - AI

Dear Hiring Team,

I am writing to apply for the Software Engineer - AI position at Kuro. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the only developer of a document-heavy AI product at an early-stage startup.

At Kniit I own a knowledge-extraction system for the German energy sector from ingestion to deployment, reporting to the CTO. Four LangGraph agents work in parallel on complex regulatory and technical documents. I measured the pipeline against a ground truth built from SAP data, which is how precision and recall went from 33% and 45% to 93% and 90%. For a second, high-volume source I replaced the LLM with deterministic code and cut a projected $200,000 LLM budget to almost nothing, so I know what cost-efficient processing at scale means in practice.

Your posting stresses trust in AI output. For that I built Expert Interface, a web app on Azure with a React frontend and a Python microservices backend, where domain experts approve every change to the knowledge graph before it is applied. In my Master's thesis at Covestro I automated the evaluation of RAG systems with RAGAS and PytrecEval and benchmarked embedding models on more than a million chunks, and as an intern there I built a LangGraph application with a React front-end and FastAPI backend, deployed on AWS with CDK.

My main gap is your stack: my backend work is in Python, my React experience is at a beginner level, and I have not worked with TypeScript, Fastify or Prisma in production. I would pick them up on the job, and Prefect and the Python side of your platform are where I can contribute from the first week.

What draws me to Kuro is how concrete the problem is. Construction documents such as bills of quantities, contracts and drawings are messy, and matching the same position across them with answers that link back to evidence is a hard entity-resolution and evaluation problem. Joining a team of 15 right after a proven first year, where the platform is still being shaped, is the kind of environment I work best in.

I am based in Berlin, hold an EU Blue Card, can work onsite at Factory Berlin Mitte every day and can start on 15 November 2026. My English is business fluent and my German is at B1 level. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
