Application for Agentic AI Engineer (m/f/d)

Dear Sea Logistics team,

I am writing to apply for the Agentic AI Engineer position at Kuehne+Nagel. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, about a year and a half of it on agentic systems that have to hold up against real business data.

At Kniit I am the sole developer of a multi-agent knowledge-extraction system for the German energy sector, reporting to the CTO. Four LangGraph agents run in parallel over regulatory and technical documents: entity extraction, relationship analysis, consolidation and reflection. I validated the system against a ground truth derived from SAP system data and raised precision and recall from 33% and 45% to 93% and 90%.

Your posting puts a lot of weight on safety and cost, and so did my work. For a second, high-volume stream an agent was the wrong tool, so I built a deterministic, code-based pipeline instead; it cut a projected $200,000 LLM budget to near-zero recurring cost while accuracy moved toward 100%. For the knowledge graph the agents produce, I built Expert Interface, a React and Python app on Azure where domain experts review and approve changes, plus an MCP service that gives agents millisecond-latency access to the graph.

I have also done the translation from business problem to architecture. In my AI consulting internship at Covestro I mapped how business users made decisions, advised where an agent could help, then built a LangGraph application with a FastAPI backend, containerized it with Docker and deployed it to AWS with CDK and GitLab CI/CD. My Master's thesis there automated RAG evaluation with RAGAS and PytrecEval against chemist-provided ground truth. I have not yet integrated agents with a TMS or WMS, and logistics is a new domain for me; at Kniit I learned the energy regulation domain quickly, and I would approach sea freight the same way.

What draws me to Kuehne+Nagel is that AI there already shows up in operations: AI in myKN cut booking times from minutes to seconds and reduced human errors. I also share Stefan Paul's view that agentic AI should support the people handling shipments rather than replace them, which is why the Kniit system keeps domain experts in the approval loop.

I will be based in Bremen, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
