Application for Product Engineer

Dear AI Futures team,

I am writing to apply for the Product Engineer position you are hiring for in Berlin. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and for the past year I have done that as the only developer at an early-stage startup, taking features from idea to production across frontend, backend and cloud.

At Kniit, a startup working for the German energy sector, I own the knowledge-extraction pipeline end-to-end. I decided how documents are ingested, chunked and indexed, and built a LangGraph system in which extraction, relationship, consolidation and reflection agents run in parallel. Measured against a ground truth derived from SAP system data, precision and recall went from 33% and 45% to 93% and 90%.

On the product side, I built the Expert Interface, a React frontend with a Python microservices backend on Azure, where domain experts review and approve changes to the knowledge graph. I also built an MCP service that exposes the graph with millisecond-latency retrieval and use Claude Code daily, with custom skills and agentic coding workflows, to ship faster. For a second, high-volume source stream I wrote a deterministic, code-based pipeline instead of calling an LLM, which cut a projected $200,000 LLM budget to near-zero recurring cost.

Before that, at Covestro, I worked with business stakeholders to understand their decision-making workflows and then designed and built the agentic application: a FastAPI backend, a React frontend, Docker, and deployment to AWS with CDK, versioned in GitLab with CI/CD. My master's thesis there evaluated RAG systems with RAGAS and PytrecEval on serverless AWS infrastructure.

What appeals to me in this role is the scope: owning a feature from the first conversation with a user through design, code and deployment, and building LLM-powered features and agents for an enterprise product from 0 to 1 with the founding team. At Kniit I am used to owning a system alone and being accountable for it. My frontend work is in React rather than TypeScript-heavy product code, and I would expect to ramp up quickly there.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. I would be glad to learn more about the company. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
