Application for Machine Learning Engineer

Dear Hiring Team,

I am writing to apply for the Machine Learning Engineer position at Lieferando. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a background in time-series forecasting and in getting models into services that other people use.

Forecasting is where I started. At Cognizant I built ARIMA, SARIMA, XGBoost, Prophet and LSTM models for EV load, and the LSTM reached 96% test accuracy. At Covestro I predicted the outcome of prepolymer synthesis from sensor time series, building lag features and rolling statistics and comparing Random Forest, XGBoost and an LSTM against the chemists' empirical curve fitting. A Streamlit dashboard let them try parameter changes before a physical run.

Deployment is the other half of the job for me. At Covestro I containerized an agentic application with Docker, deployed it to AWS with CDK, and set up GitLab CI/CD around a FastAPI backend. At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector, with Python microservices and a web app running on Azure. I measured the pipeline against ground truth from SAP systems and raised precision and recall from 33%/45% to 93%/90%. For one high-volume source I replaced LLM calls with a code-based pipeline, which removed a projected $200,000 LLM budget.

Docker and Kubernetes are part of my stack, and I know that running services at the scale of millions of requests a day is a step beyond what I have done so far. That is part of why this role interests me. My thesis also taught me to evaluate carefully: I benchmarked embedding models on over a million chunks and compared results against chemist-provided ground truth. I have worked closely with domain experts and the CTO, and I like sharing what I learn.

Your estimations team works on delivery time, logistics optimization and pricing, where a model has to hold up in a live product and balance supply and demand. Taking such models from experiment to deployment with developers, analysts and researchers is the work I want to do.

I am based in Berlin and available from 15 November 2026, and I hold an EU Blue Card. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
