Application for Backend / Platform Engineer

Dear Hiring Team,

I am writing to apply for the Backend / Platform Engineer position at Inviso. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and most of my recent work has been the backend services that sit behind the models.

At Kniit I was the sole developer of a knowledge-extraction system for the German energy sector, and I owned it from design to deployment and day-to-day operation. I built the Python microservices behind a graph curation app that domain experts use to approve changes, and an MCP service that exposes the knowledge graph to agents with millisecond-latency retrieval. I also built the multi-agent pipeline in LangGraph and a deterministic extraction path for a high-volume source, which removed a projected $200,000 LLM bill. Deciding where an LLM belongs and where plain code is safer was a large part of that work.

At Covestro I worked as an AI consulting intern. I talked to business stakeholders about how they make decisions, advised them on where agentic AI could help, and then built a LangGraph orchestration app with a FastAPI backend, containerized with Docker and deployed to AWS with CDK and GitLab CI/CD. That is the client-facing side of your role, and I am comfortable in it.

I have not yet built tenancy, entitlements or metering for a production platform, and I have not worked with C# or Go. I would be learning those parts, and the enterprise-scale details, on the job. I use Claude Code daily and keep tests and review in the loop when I do.

I am based in Germany, work well fully remote, hold an EU Blue Card, and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
