Application for AI Engineer

Dear Atira team,

I am writing to apply for the AI Engineer position at Atira. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and for the last year my job has been close to what you describe: making agents read long, messy technical documents correctly when a wrong reading is expensive.

At Kniit, a start-up working for the German energy sector, I am the only developer of an agentic knowledge-extraction pipeline and report directly to the CTO. The core is a LangGraph multi-agent system in which entity-extraction, relationship-analysis, consolidation and reflection agents run in parallel over regulatory and technical documents. The part that made it work was the evals: I measured prompt and agent changes against a ground truth derived from SAP system data, which took precision and recall from 33% and 45% to 93% and 90%.

I also learned where an agent should not be in the loop. For a second, high-volume source stream I built deterministic code instead of LLM calls, which cut a projected $200,000 LLM budget to near-zero recurring cost and pushed accuracy toward 100%. Your posting talks about fusing deterministic guardrails with flexible harnesses, and deciding where that split goes is a large part of my work at Kniit.

The extracted knowledge lives in a Neo4j knowledge graph. I exposed it to agents through an MCP service with millisecond-latency retrieval and plugged it into Claude Code, which I work in with custom skills and agentic coding workflows. Domain experts review graph changes in a React and Python web app I built on Azure. My background is Python; I have not yet run a system at millions of LLM requests a day, and that is the scale problem I would like to learn at Atira.

Turning an RFQ with thousands of pages, pricing lists and drawings into a correct configuration and offer is the same kind of work I do with energy-sector documents, only with a direct line to revenue for the manufacturer. With the Accel-led seed round in September and more than 15 customers since launch, it looks like the right moment to join a team of twelve and own a real piece of the stack.

I will be based in Munich, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
