Application for Forward Deployed Engineer

Dear Atira team,

I am writing to apply for the Forward Deployed Engineer position at Atira. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and the part of that work I like most is sitting with the people who will use an agent and building what they actually need.

At Kniit, a start-up working for the German energy sector, I am the only developer of an agentic knowledge-extraction pipeline. I report directly to the CTO and work with SAP domain experts across the German energy sector. I built a LangGraph harness in which extraction, relationship, consolidation and reflection agents run in parallel, and measured changes against a ground truth derived from SAP system data. Precision and recall went from 33% and 45% to 93% and 90%. For a second, high-volume source stream I built deterministic code instead of LLM calls, which cut a projected $200,000 LLM budget to near-zero recurring cost. Knowing when not to use an agent matters as much in a customer deployment as building one.

At Covestro, as an AI consulting intern, I worked with business stakeholders to understand how they made decisions, advised them on where agentic AI could help, and turned that into a solution approach. I then built it: a LangGraph application with a FastAPI backend and React frontend, containerized with Docker and deployed to AWS with CDK, versioned in GitLab with CI/CD. At Kniit I also built a React and Python web app on Azure where domain experts review and approve changes to the knowledge graph before they are used.

My own tooling is Claude Code with custom skills, and I connected our knowledge graph to it through an MCP service, so my coding agents can query the same domain knowledge the pipeline extracts.

Atira's problem is one I recognise. Pulling requirements out of long RFQs and specifications is close to what I have spent the last year doing with regulatory and technical documents, only here a mistake costs a manufacturer real money. With the Accel-led seed round and more than 15 customers since launch, the FDE playbook is still being written, and I would like to help write it.

To be direct about German: my German is B1 and my English is business fluent. I know DACH customers often expect German, so I would rather say this now. I will be based in Munich, hold an EU Blue Card, am happy to travel to customer sites, and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
