Application for AI Engineer – LLMs & Agents

Dear summ AI team,

I am writing to apply for the AI Engineer – LLMs & Agents position at summ AI. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently agents that turn complex regulatory and technical documents into knowledge that domain experts can use.

At Kniit, a start-up working for the German energy sector, I am the only developer of an agentic knowledge-extraction pipeline and report directly to the CTO. I built a LangGraph system in which extraction, relationship, consolidation and reflection agents run in parallel over regulatory and technical documents. To know whether a change actually worked, I evaluated changes against a ground truth derived from SAP system data; precision and recall went from 33% and 45% to 93% and 90%. Cost mattered as much as quality: for a second, high-volume source stream I built a deterministic, code-based pipeline instead of LLM calls and cut a projected $200,000 LLM budget to near-zero recurring cost.

I also connect models to data and tools. I built an MCP service that exposes our knowledge graph with millisecond-latency retrieval, and a React and Python web app on Azure where domain experts review and approve knowledge-graph changes. At Covestro I worked as an AI consulting intern with business stakeholders to understand their decision-making workflows, then designed and built the agentic application, from the React frontend and FastAPI backend to Docker and deployment on AWS with CDK, versioned in GitLab with CI/CD. My master's thesis there automated RAG evaluation with RAGAS and PytrecEval and benchmarked multilingual embedding models on more than a million chunks of internal data.

summ AI's starting point, making administrative language and processes understandable, is a concrete problem with a clear user: the person waiting for a decision and the employee who has to find the knowledge first. That is close to what I did at Kniit, turning expert knowledge into something people can look up, and I would like to do it close to the people who use it.

My German is B1 and my English is business fluent. Since your customers are public administrations, I want to be clear about that from the start. I will be based in Munich, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
