Application for DevOps Engineer AI & Developer Platforms

Dear Vector team,

I am writing to apply for the DevOps Engineer AI & Developer Platforms position at Vector. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and I have worked with two tools from your stack, Claude Code and LiteLLM, at Kniit.

At Kniit, a start-up working for the German energy sector, I am the only developer of an agentic knowledge-extraction pipeline and report directly to the CTO. The system runs LangGraph agents over complex regulatory and technical documents, and I also built an Azure-hosted web app where domain experts review the results. The stack includes LiteLLM, Docker and Kubernetes. Measured against a ground truth derived from SAP system data, precision and recall went from 33% and 45% to 93% and 90%. Cost was part of the job too: for a second, high-volume source stream I built a deterministic, code-based pipeline instead of LLM calls and cut a projected $200,000 LLM budget to near-zero recurring cost. Your posting asks for the same judgment when it comes to weighing new AI and developer tools on cost and benefit.

My own development work is AI-assisted. I use Claude Code with custom skills and agentic coding workflows, and I built an MCP service that exposes our knowledge graph with millisecond-latency retrieval and integrated it into Claude Code. Helping development teams work this way is where I would contribute most.

On the platform side, at Covestro I containerized an agentic application with Docker, deployed it to AWS with CDK as Infrastructure as Code and versioned it in GitLab with CI/CD pipelines; for my master's thesis I built serverless AWS infrastructure (Lambda, SQS, DynamoDB) with CDK. I have not yet worked with Flux, Vault or the Grafana stack at work, and I have not handled IT operations such as incidents and changes. That is the part I would learn from your team.

Vector's decision this year to invest in code-centric software development, cloud and AI, and to look beyond automotive, puts more weight on the shared platforms your development teams build on. I would like to help build them.

I will be based in Stuttgart, hold an EU Blue Card and can start on 15 November 2026. My German is B1 and my English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
