Application for Forward Deployed Engineer

Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer position. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic knowledge-extraction system on Azure, in close contact with the people who use it.

At Kniit I owned that system end to end. I worked with SAP domain experts across the German energy sector and built the pipeline in Python: ingestion, chunking, prompt engineering and multi-agent extraction with LangGraph. Measured against ground truth from the customer's SAP system, precision and recall went from 33% and 45% to 93% and 90%. I also built a Model Context Protocol query service on the knowledge graph and a React and Python microservices web app where experts review and approve changes. I reported directly to the CTO.

You describe improving agents through real usage, which means reading conversations and traces to find out why an agent failed. The Kniit work followed the same loop: measure against ground truth, find where the extraction failed, change prompts and agent roles, measure again. My Master's thesis at Covestro was automated evaluation of RAG systems with RAGAS and PytrecEval. I also work daily with Claude Code, custom skills and agentic coding workflows, and I review the output against clean code principles.

The customer side is familiar to me. As an AI consulting intern at Covestro I sat down with business stakeholders, learned how they made decisions and turned that into an agentic application with a React front end and a FastAPI backend, deployed with Docker on AWS using CDK. I am comfortable with APIs, Postgres and SQL, and Python is my main language. I have used TypeScript less, so I would be picking it up on the job.

A hands-on role that mixes customer delivery with product work and an early-stage team appeals to me. At Kniit I was the one developer covering the full stack in a small startup, and I would like to do that again with more customers and a larger product around it.

I am based in Berlin, hold an EU Blue Card and am happy to travel to client sites. I can start from 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
