Application for ML Engineer, Backend

Dear Hiring Team,

I am writing to apply for the ML Engineer, Backend position at Prior Labs. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of backend services that put models in front of real users.

At Kniit GmbH I own a knowledge-extraction system for the German energy sector end-to-end, reporting to the CTO. I built a Model Context Protocol query API on top of a knowledge graph that answers in milliseconds, and a Python microservices backend with FastAPI for a curation web app on Azure. I also replaced LLM calls with a deterministic pipeline for a high-volume source and cut a projected $200,000 LLM budget to near-zero recurring cost, so cost per request is something I design for from the start.

At Covestro I worked on the infrastructure side. For my consulting internship I built a FastAPI backend, containerised it with Docker and deployed it to AWS with CDK and GitLab CI/CD. For my Master's thesis I built AWS infrastructure with Lambda, SQS and DynamoDB through CDK to run RAG evaluation, and I used PyTorch there. I have not used Terraform or GCP in a job. CDK taught me infrastructure as code on AWS, and I would pick up the Terraform and GCP side quickly.

The reason Prior Labs stands out is the problem. TabPFN does its learning in the forward pass, so serving it fast and cheaply on millions of rows is a real systems question, and the open weights, the managed API and the customer VPC deployments all need one serving path to hold up. I would like to work on that with the researchers who built the model.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. I am happy to travel to your offices when needed. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
