Application for Forward Deployed Engineer

Dear Hiring Team,

I am writing to apply for the Forward Deployed Engineer position at BLP. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic system that I took from first prototype to a working product with domain experts.

At Kniit I owned that system end-to-end: ingestion, chunking, prompt engineering and indexing, with multi-agent workflows in LangGraph for regulatory and technical documents. I sat with SAP domain experts to understand what they needed, and I measured the result against ground truth derived from their SAP system. Extraction quality went from 33%/45% to 93%/90% precision and recall. I also replaced an LLM-heavy step with deterministic code and cut a projected $200,000 LLM budget to near-zero recurring cost, which is the kind of build-versus-buy and cost trade-off your role asks for.

Integrations and delivery are familiar ground. I built an MCP query service on the knowledge graph and plugged it into Claude Code, which I use every day. I also built an expert web interface (React, Python microservices) on Azure so users could approve changes themselves. At Covestro I worked with business stakeholders on their decision workflows and turned them into an agentic application with FastAPI, Docker and AWS CDK deployment. My backend work is in Python, so TypeScript is the part I would be picking up fast on the job.

BLP's focus on automating ERP-based finance and operations processes, with 1,300+ deployed projects, is what draws me to the role. Being embedded with a customer and shipping in days rather than quarters is how I like to work.

I am based in Cologne, hold an EU Blue Card, am happy to travel to customer sites, and can start on 15 November 2026. Thank you for considering my application. I would be glad to show a live demo of my work.

Kind regards,

Chandu Prasad Bhairapu
