Application for AI Solution Engineer (m/w/d)

Dear Hiring Team,

I am writing to apply for the AI Solution Engineer position at TRILUX. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, mostly LLM, RAG and agent systems that connect to company data and are used by non-technical colleagues. I have not worked for five years yet, but I have owned systems from prototype to production.

At Kniit I am the sole developer of a knowledge-extraction pipeline for the German energy sector. I turned the requirements of SAP domain experts into a multi-agent LangGraph system and raised precision and recall from 33%/45% to 93%/90% against ground truth derived from their SAP system. I also built an MCP query service on top of the knowledge graph and a React and Python web app on Azure where experts approve changes. Before that, at Covestro, I built an agentic LangGraph application with a React front end and a FastAPI backend, containerized it with Docker and deployed it to AWS with CDK and GitLab CI/CD.

My thesis at Covestro was about testing RAG systems: I automated generation and retrieval evaluation with RAGAS and benchmarked embedding models on more than one million chunks. That taught me to measure whether an assistant is actually good before it reaches users. During my consulting internship I sat with business stakeholders, learned how they make decisions and shaped the solution from there.

TRILUX appeals to me because the AI team works directly with IT and the business units across the group, so the assistants get built around real daily work. I would like to help with that and with reusable components for AI solutions.

I am based in Cologne, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level and improving; my working language is English. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
