Application for Agentic Software Developer (m/w/d) Strategische Projekte

Dear Mr Ruberg,

I am writing to apply for the Agentic Software Developer position at GOLDBECK. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic knowledge-extraction system on Azure.

At Kniit I built that system end to end: ingestion, chunking, prompt engineering and indexing, with LangGraph agents extracting entities and relationships from long regulatory and technical documents. Measured against ground truth from the customer's SAP system, precision and recall went from 33% and 45% to 93% and 90%. I also built a Model Context Protocol query service on top of the knowledge graph and a React and Python microservices web app, running on Azure and Kubernetes, where domain experts review and approve changes. That is close to what you describe: RAG, agentic workflows and large document sets, kept in production use.

You ask for evaluations, tests and monitoring of AI results. My Master's thesis at Covestro was exactly that: automated evaluation of RAG systems with RAGAS and PytrecEval against ground truth provided by chemists. At Kniit the same habit applies to every extraction strategy I ship. I also work daily with Claude Code, custom skills and agentic coding workflows, and I review and test what they produce before it goes anywhere.

Working with the business side is the part I like most. As an AI consulting intern at Covestro I sat down with stakeholders, learned how they made decisions, and turned that into an agentic application with a React front end and a FastAPI backend, deployed with Docker on AWS. At Kniit I worked directly with SAP experts and reported to the CTO. I would like to do the same with your project management and specialist departments, including spending time with them on site.

Your posting says the job has shifted from writing code to understanding the domain, designing the architecture and judging results. That matches how I work, and building strategic AI solutions that many colleagues use daily at a construction company is a setting I want to be in. My day-to-day language is Python rather than C# or Angular, and I would pick up Angular quickly.

I am based in Bielefeld, hold an EU Blue Card and can start from 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
