Application for AI Engineer (m/f/d)

Dear Hiring Team,

I am writing to apply for the AI Engineer position. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of a multi-agent system that runs in production. You asked what I have built with AI agents, so I start there.

At Kniit I own a knowledge-extraction pipeline for the German energy sector and report to the CTO. Several LangGraph agents extract entities and relationships from regulatory documents, and reflection agents review what the others produce. I measured the output against a ground truth derived from SAP data, and precision and recall went from 33 % and 45 % to 93 % and 90 %. For one high-volume data stream I replaced the LLM with code-based extraction, which cut a projected $200,000 LLM budget to almost nothing.

I work with coding agents every day. At Kniit I use Claude Code with custom skills and agentic workflows to write, review and test code, and I built an MCP query service that exposes the knowledge graph to Claude Code. The same codebase includes Python microservices, a React front end and Docker deployments on Azure. At Covestro I shipped a FastAPI backend with a LangGraph agent and a GitLab CI/CD pipeline to AWS. I have not used Cursor, so that is something I would pick up quickly alongside Claude Code.

The idea of agents that write, test and improve their own code is where I want to spend my time, and the chance to shape how an engineering team works with AI is what draws me to this role. My background in evaluating RAG and agent output should help with the quality side of it.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
