Application for Machine Learning Engineer

Dear Cancierge team,

I am writing to apply for the Machine Learning Engineer position at Cancierge. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and the part I enjoy most is the one you describe: turning logic designed by domain experts into clean, modular code and measuring whether it works.

At Kniit, a start-up building for the German energy sector, I am the only developer of a knowledge-extraction system for regulatory and technical documents and report directly to the CTO. I built the text pipeline from ingestion and chunking to indexing, and a set of LangGraph agents on top. I measured the system against ground truth derived from SAP systems and changed it step by step until precision and recall went from 33% and 45% to 93% and 90%.

I have built evaluation harnesses for language models before. For my Master's thesis at Covestro I automated the evaluation of a RAG system with RAGAS and PytrecEval against answers written by chemists, benchmarked multilingual embedding models on more than a million chunks of internal data, and fine-tuned models for better retrieval, working in Python with PyTorch and Hugging Face Transformers. Outside work I fine-tuned Open Llama 3B with QLoRA.

I have also trained classic models. As a data science intern at Covestro I built Random Forest, XGBoost and LSTM models on sensor time series with engineered lag and rolling-window features, and at Cognizant an LSTM for electric vehicle load forecasting reached 96% test accuracy and held up on unseen data. For deployment I have containerized services with Docker and deployed them to AWS with CDK.

Cancierge builds a regulated medical product, now live at a large breast cancer center and working toward MDR Class IIa, so every change to the AI core has to be measurable and traceable back to what the clinical experts designed. That is how I already work at Kniit: domain experts validate and approve changes to the knowledge graph in a web app I built, and I measure each version against ground truth. I would like to do the same for software that guides cancer patients and their clinicians.

I will be based in Aachen and am happy to come to your team days. I hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application. I would be glad to talk with your CTO about the AI core.

Kind regards,

Chandu Prasad Bhairapu
