Application for Platform Engineer Analytics & KI-Platform

Dear REWE digital team,

I am writing to apply for the Platform Engineer Analytics & KI-Platform position at REWE digital. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and I want to move closer to the platform that other teams build their GenAI and ML work on.

At Kniit, a start-up building for the German energy sector, I am the only developer of a knowledge-extraction system and report directly to the CTO. That means I own the architecture as well as the code: a multi-agent LangGraph pipeline that turns regulatory documents into a knowledge graph, Python services containerized with Docker, a web app on Azure, and LiteLLM for access to the LLM APIs. I validated the pipeline against ground truth from SAP systems and raised precision and recall from 33% and 45% to 93% and 90%.

What I enjoy most is building AI that other people rely on in their daily work. I made the knowledge graph available to Claude Code through an MCP query service with millisecond-latency retrieval, and built a web app on Azure where SAP experts validate and approve changes to the graph. For a second, high-volume data source I built a deterministic, code-based pipeline that cut a projected $200,000 LLM budget to almost nothing.

On the infrastructure side, at Covestro I containerized an agentic LangGraph application and deployed it to AWS with infrastructure as code in AWS CDK, with CI/CD in GitLab, and for my Master's thesis I set up Lambda, SQS and DynamoDB with CDK to automate the evaluation of the PrismaChat RAG system. I have not worked with Terraform, GCP, Snowflake, BigQuery or Databricks in a job yet. Azure, one of the providers you name, is what I deploy on today, and CDK maps closely to Terraform, so I would get up to speed quickly.

REWE digital already runs GenAI for its own staff. Your internal chatbot for around 20,000 administrative staff showed that a technically sound tool only counts once people use it, and that it has to run in Europe for data protection. Those are platform questions, and with more than a billion records a day flowing through your systems, a self-service platform decides how quickly logistics, stores and administration can turn ML and GenAI into less food waste and reliable supply.

I am based in Cologne, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level and I am improving it. Thank you for considering my application. I would be glad to talk about how I could contribute to the Data Intelligence Platform team.

Kind regards,

Chandu Prasad Bhairapu
