Application for AI Engineer

Dear Hellen,

I am writing to apply for the AI Engineer position at Event Inc. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and I already work the way your posting describes: the agent writes along, I decide.

At Kniit I am the sole developer of an agentic knowledge-extraction system for the German energy sector, reporting to the CTO. I build with Claude Code, custom skills and agentic coding workflows, and I have learned to distrust output I have not checked. The system itself is built on checks: four LangGraph agents extract knowledge from regulatory documents, and I measured them against a ground truth derived from SAP system data. Against it, precision and recall rose from 33% and 45% to 93% and 90%. For a second, high-volume stream I built a deterministic, code-based pipeline instead, which cut a projected $200,000 LLM budget to near-zero recurring cost.

Integration work has been part of both of my recent roles. At Covestro I built a FastAPI backend and React frontend for an agentic LangGraph app, tested the APIs with Postman, containerized everything with Docker and deployed it to AWS with CDK and GitLab CI/CD. At Kniit I built an MCP service that serves our knowledge graph with millisecond latency and a React and Python app on Azure where domain experts approve changes. Unclear requirements are normal for me: at Covestro I started by mapping how business users made decisions and turned that into requirements, and at Kniit I work directly with SAP experts who are not engineers.

Where I have less to show is production reliability: I have not yet run feature flags, rollbacks or on-call monitoring for a customer-facing product in a job. That is what I would want to learn first in a team that ships in small, careful steps.

Event Inc is interesting to me because you are turning a marketplace that many companies already use into an AI-first platform, and doing it with AI agents inside engineering rather than as a side project. Event booking is full of the slow, manual coordination that agents can take over when someone checks their work properly.

I am based in Hamburg, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
