Application for AI Engineer

Dear Hiring Team,

I am writing to apply for the AI Engineer position at Jobgether and its partner company. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and my most recent work is an agentic system built from the first prototype as the only developer at an early-stage start-up.

At Kniit I own a knowledge-extraction system for the German energy sector and report to the CTO. Four LangGraph agents run in parallel on regulatory and technical documents. Measured against a ground truth derived from SAP data, precision and recall rose from 33% and 45% to 93% and 90%. Domain experts approve every knowledge-graph change in a web app I built (React, Python microservices, Azure), so a human stays in the loop. I also built an MCP service that gives agents millisecond access to the Neo4j graph, which is the closest I have come to the ontology and context work in your posting.

The physical-world side of the role is where my experience is narrower. At Covestro I built XGBoost and LSTM models on sensor time-series from chemical synthesis, with lag and rolling-window features, and put them in a Streamlit dashboard that chemists used to test parameter changes. I also worked with business stakeholders on their decision workflows and deployed a LangGraph, FastAPI and React application with Docker, AWS CDK and GitLab CI/CD. I have not yet worked with video streams, PLC or OPC-UA data, or ERP and CMMS connectors in production, and my computer vision experience is limited to coursework.

What attracts me is the zero-to-one setting: an industrial platform where agents have to be traceable, approved by people and cheap to run. Reducing a projected $200,000 LLM budget to almost nothing at Kniit taught me to care about exactly that.

I am based in Germany, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
