Application for Backend Software Engineer, Expense

Dear Hiring Team,

I am writing to apply for the Backend Software Engineer position in Navan's Expense Engineering team in Berlin. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, mostly Python backends with LLM agents inside them that have to be right, not just plausible.

Document extraction is the closest thing I have to your receipt work. At Kniit I am the only developer of a system that extracts entities and relationships from regulatory and technical documents for the German energy sector, reporting to the CTO. Four LangGraph agents run in parallel: extraction, relationship analysis, consolidation and a reflection step that checks the others. I measured every change against a ground truth built from SAP data, and precision and recall went from 33% and 45% to 93% and 90%.

Your posting says to prefer deterministic code for rules and use models for language and orchestration. I applied the same principle at Kniit. For a second, high-volume source I replaced the model calls with plain code, which cut a projected $200,000 LLM budget to almost nothing while pushing accuracy toward 100%. I also built a Model Context Protocol service that exposes the knowledge graph to agents as a tool, with millisecond retrieval, and Expert Interface, a web app on Azure where domain experts approve graph changes before they are written.

On the backend side I have built FastAPI services, Python microservices and AWS infrastructure with CDK, Lambda, SQS and DynamoDB, and shipped a Dockerised FastAPI stack to AWS through GitLab CI/CD. I have not worked in Java or Spring Boot yet. Since you list Java as preferred but not required, I would learn your Java services through code review and small shipped changes, as I do with any unfamiliar codebase.

Navan launching Expense Chat in March, where an agent reads receipt photos and asks for what is missing, is the kind of product I want to work on. Bringing it to EMEA spend with VAT, per diem and multi-entity setups is a harder problem than the US launch, and that is the part that interests me.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
