Application for Embedded / Full Stack SW Developer (m,w,d)

Dear Hiring Team,

I am writing to apply for the Embedded / Full Stack SW Developer position at Medirion. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most of it as the developer who owns a system from backend to user interface.

At Kniit I was the sole developer of a knowledge-extraction system for the German energy sector. I wrote the Python microservices, built the React web app that domain experts use to approve changes, containerized it with Docker and ran it on Azure, working directly with the CTO. At Covestro I built a similar stack with a FastAPI backend and React frontend, deployed it to AWS with CDK, and used GitLab CI/CD for every release. I work in Git daily and in agile teams.

Your data is sensor data, and that is familiar ground. In my Covestro internship I engineered lag and rolling-window features from process sensor time-series, trained and compared XGBoost and LSTM models, and gave the chemists a dashboard to test parameter changes against the predictions. I have not worked in Java, C++ or AngularJS professionally, so I would be learning those on the job. My Python and cloud background is where I can contribute from the first week.

What draws me to Medirion is the concrete goal: a five-minute, non-invasive thermography scan that helps find rheumatoid arthritis early, when treatment works best. A role that starts with building the software and can grow into architecture responsibility is the kind of ownership I want.

I am based in Duisburg, hold an EU Blue Card, and can start on 15 November 2026. My German is B1 and my English is business fluent. Thank you for considering my application. I would be glad to talk about how I can help.

Kind regards,

Chandu Prasad Bhairapu
