Application for Scientific Software & Research Platform Engineer (m/f/d)

Dear Hiring Team,

I am writing to apply for the Scientific Software & Research Platform Engineer position at Thermo Fisher Scientific. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, including earlier work that turned process sensor data into predictive models for chemists.

At Covestro I worked on time-series sensor data from prepolymer synthesis. I engineered lag features and rolling windows, compared Random Forest, XGBoost and LSTM models against empirical curve fitting, and built a Streamlit dashboard so chemists could simulate parameter changes before running a physical batch. That improved the early detection of batches likely to miss specification. My bachelor's degree is in Mechanical Engineering, and at Covestro I worked with process sensor data from real synthesis runs, although I have not yet worked directly on mass spectrometers.

On the software side I build Python services and tools that others use directly. At Kniit I was the sole developer of a knowledge-extraction pipeline, from ingestion to indexing, and raised extraction precision and recall from 33%/45% to 93%/90% against a ground truth derived from SAP data. I tracked precision and recall against that ground truth throughout, and deployed the services on Azure with Docker and Kubernetes. At Covestro I deployed an agentic application with LangGraph, FastAPI and GitLab CI/CD on AWS, and I wrote the evaluation setup for RAG systems. I am used to working with domain experts who check my results, and I would bring the same approach to your researchers, production engineers and support teams.

The Bremen site develops and builds the mass spectrometers, and this role sits between the research, production and support teams around them. Modeling diagnostics from instrument data and building tools others can reuse is the work I want to do, and I would spend as much time in the lab as needed to learn the instruments properly.

I am based in Bremen, hold an EU Blue Card and can start on 15 November 2026. My salary expectation is EUR 60,000 gross per year. I am happy to be on site and to travel. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
