Application for Campus AI Engineer: Claude & Enterprise Automation

Dear Hiring Team,

I am writing to apply for the Campus AI Engineer: Claude & Enterprise Automation position at NewRocket. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently with Claude as part of my daily engineering work.

At Kniit I was the sole developer of an agentic knowledge-extraction system for the German energy sector. I built multi-agent extraction pipelines in LangGraph and an MCP query service that I integrated into Claude Code, and I worked with SAP domain experts and the CTO from the first requirements to a running system. Moving the extraction precision and recall from 33% and 45% to 93% and 90% taught me to measure agent quality against real ground truth instead of trusting demos.

Your role also asks for people who can talk to clients and product managers. At Covestro I worked with business stakeholders to understand how they make decisions, then designed and deployed an agentic LangGraph application for them: React front end, FastAPI backend, Docker, and AWS deployment with CDK and GitLab CI/CD. In my thesis I built the evaluation setup for a RAG system, so I am used to taking a prototype toward production.

NewRocket's focus on Claude-powered applications and intelligent automation for enterprise clients is the kind of work I want to do full time. Working across engineers, data scientists and consultants on the full AI lifecycle suits how I have worked so far. I have not worked with ServiceNow yet and would learn it on the job.

I am based in Germany, hold an EU Blue Card, and can start on 15 November 2026. I am fully willing to travel to client sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
