Application for Cloud & AI Engineer Python (m/w/d)

Dear Mr. Steck,

I am writing to apply for the Cloud & AI Engineer Python position at Computer Futures. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most of it on AWS and Azure with Python as my main language.

On the cloud side, I have defined infrastructure as code and shipped it. At Covestro I containerized an agentic AI application (FastAPI backend, React frontend) with Docker and deployed it to AWS with CDK through GitLab CI/CD pipelines. During my Master's thesis I built the serverless AWS setup for a RAG evaluation service (Lambda, SQS, DynamoDB) in CDK as well. I have not used Terraform in a job yet; my experience is with CDK, which follows the same approach, and I would pick up Terraform quickly.

At Kniit I was the sole developer of a knowledge-extraction system for the German energy sector. The Python services run in a Docker and Kubernetes stack on Azure, and I owned the whole path from prototype to deployed product. I measured the multi-agent extraction against ground truth and lifted precision and recall from 33%/45% to 93%/90%. That work taught me what data and AI teams need from a platform: reliable deployments, clear logging and quick fixes when something breaks.

Your description asks for a builder who works closely with data, AI and software teams, and that is how I work. I talked to domain experts and stakeholders at Kniit and Covestro, turned their needs into working software and kept it running. My German is B1, so I would be most comfortable in an English-speaking project team for now.

I am based in Frankfurt am Main, available from 15 November 2026 and hold an EU Blue Card. I am happy to travel to client sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
