Application for AI Solutions Specialist (f/m/d) - Business Applications, Agents & Automation

Dear Hiring Team,

I am writing to apply for the AI Solutions Specialist (f/m/d) - Business Applications, Agents & Automation position at Siemens Energy. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently an agentic system for the German energy sector.

At Kniit I was the sole developer of an agentic knowledge-extraction pipeline, working with SAP domain experts who were not engineers. I designed multi-agent extraction with LangGraph and tuned the prompts until precision and recall went from 33% and 45% to 93% and 90% against ground truth from the customer's SAP system. I also built an MCP query service that exposes the knowledge graph through an API, and an Expert Interface in React and Python on Azure where business experts approve changes themselves. That is the pattern your role describes: turn a business need into a working prototype, then make it usable by people outside IT.

Before that, as an AI consulting intern at Covestro, I sat with business stakeholders, learned how they made decisions and turned their requirements into an agentic application. I built it with LangGraph, a React front-end and a FastAPI backend, containerized it with Docker and deployed it to AWS with CDK and GitLab CI/CD. My thesis covered RAG evaluation with RAGAS, so I am used to measuring whether an AI solution actually works before it goes to users.

I have not worked on Power Platform or classic RPA tools, and I would be learning those on the job. What I bring is the engineering side: Python, REST and MCP interfaces, databases such as Postgres, Neo4j and MongoDB, and an agile way of working with Claude Code that lets me get from idea to prototype quickly. Because the data in a sales organization is sensitive, I also care about access control and about keeping a human approval step where an agent acts on business data.

Siemens Energy's Gas Services work on modernization and digitalization of the turbine fleet is close to the energy domain I have worked in at Kniit, and a role that supports citizen developers across Global Sales Operations means my solutions would be used by many teams. I am based in Erlangen, hold an EU Blue Card, and can start on 15 November 2026. My German is at B1 level and my English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
