Application for AI Engineer

Dear Hiring Team,

I am writing to apply for the AI Engineer position at Meltwater. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a focus on language models, retrieval and evaluation, which is the ground your Data Enrichment team works on.

At Covestro I wrote my Master's thesis on evaluating RAG systems. I built the evaluation with RAGAS and PytrecEval against ground truth from chemists, benchmarked multilingual embedding models on more than one million chunks of internal data, and worked on fine-tuning models for retrieval. The pipelines ran on AWS, set up with CDK. That work gave me a practical feel for how pretrained language models behave on real text at scale, and for measuring whether a change actually helps.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I designed multi-agent LLM extraction with LangGraph and raised precision and recall from 33% and 45% to 93% and 90%, measured against ground truth taken from the customer's SAP system. For a second, high-volume source I replaced the LLM calls with a deterministic pipeline, which removed a projected $200,000 LLM budget. The system runs in Docker and Kubernetes on Azure. Earlier, an LSTM for EV load forecasting at Cognizant and Random Forest, XGBoost and LSTM models at Covestro gave me the classical machine learning and PyTorch and TensorFlow basics.

Meltwater turns an enormous stream of unstructured media and social data into signals that around 27,000 customers act on. Making NLP models for that kind of data accurate, fast and measurable is the problem I want to work on, and I would like to learn from the senior team members on the way.

I am based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
