Application: AI Engineer, Development Expert

Dear Guido Menkhaus,

I am writing to apply for the AI Engineer, Development Expert position at SAP. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and for the past year I have built agentic AI for the German energy sector, so the Industry AI unit for Energy and Natural Resources is where I want to take that work next.

At Kniit GmbH I am the only developer on an LLM-based knowledge-extraction pipeline for the energy sector, reporting to the CTO and working with SAP domain experts. It reads regulatory and technical documents with LangGraph agents that run in parallel, including a reflection agent that checks the others. Measured against ground truth from SAP systems, I raised precision and recall from 33% and 45% to 93% and 90%.

For a second, high-volume data source I built a deterministic, code-based extraction pipeline. It brought a projected $200,000 LLM budget down to almost no running cost and pushed accuracy toward 100%. That work taught me to measure correctness, throughput and cost side by side, which high-throughput agent use cases need.

Retrieval runs through all of my work. At Kniit I built an MCP service that gives agents millisecond access to the knowledge graph, and I use it with Claude Code and my own skills when I develop. In my master's thesis at Covestro I benchmarked multilingual embedding models on more than a million chunks of internal data and automated RAG evaluation with RAGAS and PytrecEval. Earlier at Covestro I deployed an agentic LangGraph application to AWS with Docker, CDK and GitLab CI/CD.

I know the posting asks for more years of architecture and team leadership than I have. What I can offer is that I have designed and run a complete agentic system in your target industry on my own, and I am ready to take on the architecture and mentoring side of this role.

SAP is positioning Joule for utilities as a copilot grounded in the SAP Knowledge Graph and business data, with agents planned for meter-to-cash steps such as implausible meter readings. At Kniit I built a knowledge graph for the energy sector, checked it against SAP data and gave agents access to it, so I would like to bring that experience to SAP's own energy agents.

I live in Essen, hold an EU Blue Card and can start on 15 November 2026. I am happy to relocate to the Munich area and to travel when needed.

Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
